A NEW NAME FOR A MEALYBUG

By EDSON J. HAMBLETON

Office of Foreign Agricultural Relations, U. S. Dept. of Agriculture

The genus *Morrisonella* was recently erected by the writer (Rev. de Ent. 17 (1-2): p. 16, Aug. 1946) to accommodate a number of described and undescribed species of hypogean mealybugs. This name is preoccupied by *Morrisonella* Bartsch, The Nautilus, 50: p. 23, July 1945; therefore a new name, *Coccidella*, is here proposed.
